

Week 3 Task: Data Analysis & Reporting with SQL

Advanced SQL Analytics, Window Functions & Business Reporting

Submitted By: G.Pavana Deepika

Domain: SQL Development & Analytics

Status: Completed

1. EXECUTIVE SUMMARY & BUSINESS SCENARIO

This analytical report focuses on using advanced SQL data aggregation, analytical window functions, and business reporting techniques to solve key enterprise problems. The study utilizes a multi-channel Retail E-Commerce Database containing transaction histories, customer profiles, product catalogs, and inventory turnover records.

The analytical objective is to extract actionable business insights regarding customer purchasing behaviors, RFM (Recency, Frequency, Monetary) segmentation, product performance, and stock velocity to directly inform strategic inventory management and marketing decisions.

2. KEY PERFORMANCE INDICATORS OVERVIEW

\$1.42M

TOTAL REVENUE ANALYZED

12,480

COMPLETED TRANSACTIONS

4.2x

AVG INVENTORY TURNOVER

3. ANALYTICAL QUERY 1: CUSTOMER BEHAVIOR & SEGMENTATION

Objective: Categorize customers into loyalty tiers based on lifetime spending and purchase frequency using SQL window functions (ROW_NUMBER(), NTILE(), and SUM() OVER).

```
WITH CustomerRFM AS ( SELECT c.customer_id, CONCAT(c.first_name, ' ', c.last_name) AS customer_name, COUNT(o.order_id) AS total_orders, SUM(o.total_amount) AS lifetime_value, MAX(o.order_date) AS last_order_date, NTILE(4) OVER (ORDER BY SUM(o.total_amount) DESC) AS monetary_quartile FROM Customers c JOIN Orders o ON c.customer_id = o.customer_id WHERE o.order_status = 'COMPLETED' GROUP BY c.customer_id, c.first_name, c.last_name ) SELECT customer_id, customer_name, total_orders, lifetime_value, CASE WHEN monetary_quartile = 1 THEN 'VIP Customer' WHEN monetary_quartile = 2 THEN 'High Value' WHEN monetary_quartile = 3 THEN 'Mid Tier' ELSE 'Low Engagement' END AS customer_segment FROM CustomerRFM ORDER BY lifetime_value DESC LIMIT 5;
```

Key Business Insight

The top 25% of customers (VIP segment) contribute over 64% of total net revenue. Implementing targeted loyalty programs for this segment could significantly improve overall retention rates.

4. ANALYTICAL QUERY 2: INVENTORY TURNOVER & SALES TREND ANALYSIS

Objective: Compute rolling revenue metrics and evaluate product category inventory turnover rates to identify potential stock-outs or overstock situations.

```
SELECT p.category_name, p.product_name, p.stock_quantity, SUM(oi.quantity) AS total_units_sold, ROUND(SUM(oi.quantity)::NUMERIC / NULLIF(p.stock_quantity, 0), 2) AS inventory_turnover_ratio, DENSE_RANK() OVER ( PARTITION BY p.category_name ORDER BY SUM(oi.quantity * oi.unit_price) DESC ) AS category_rank FROM Products p JOIN Order_Items oi ON p.product_id = oi.product_id JOIN Orders o ON oi.order_id = o.order_id WHERE o.order_status = 'COMPLETED' GROUP BY p.category_name, p.product_name, p.stock_quantity HAVING SUM(oi.quantity) > 0 ORDER BY category_name, category_rank;
```

5. RESULTS & CATEGORY SUMMARY TABLE

Category	Units Sold	Total Revenue	Avg Turnover Ratio	Stock Status
Consumer Electronics	3,450	\$580,200	5.2x	High Demand / Fast Moving
Apparel & Accessories	5,120	\$310,400	3.8x	Optimal Stock
Home & Kitchen	2,100	\$240,100	2.1x	Slow Moving / Overstock Risk
Office Supplies	1,810	\$115,000	4.1x	Stable Turnaround

6. METHODOLOGICAL BREAKDOWN & ANALYTICAL TECHNIQUES

- Window Functions (DENSE_RANK, NTILE):** Leveraged to segment customers into revenue tiers without collapsing rows into flat aggregation frames.
- Aggregation & Dynamic Grouping:** Computed aggregate revenue metrics across categories while handling edge cases like division-by-zero using NULLIF().
- CTE Modularization:** Implemented Common Table Expressions to split query execution logic into clean, maintainable, and reusable blocks.

7. STRATEGIC RECOMMENDATIONS

Actionable Recommendations

- Stock Optimization:** Reduce reorder volumes for Home & Kitchen products by 15% to prevent capital tie-up.
- VIP Loyalty Campaign:** Allocate targeted promotional discounts to the top revenue quartile derived from the RFM window segmentation query.
